

Cataract and Keratoplasty: Clinical-Surgical Implications

The different options when dealing with cataract surgery in front of corneal pathology will be covered. What is better, both procedures at the same time, separated, which order? The standardization of modern keratoplasty techniques such as DSAEK and DMEK as well as the potential use of special IOL's (Toric, "piggy-back",) has, again, changed our possible approaches. A review of the current status of this common combination will be reviewed.
